

Book now to secure a place at the prestigious NIA's Annual Conference.

With only a few exhibitor stands left, don't miss the opportunity to raise your company profile at the insulation industry's leading annual event.

The Annual Conference of the National Insulation Association (NIA) which takes place at The Cotswold Water Park Four Pillars Hotel, near Swindon on Wednesday 15th December 2010, provides a valuable business networking platform, bringing together manufacturers, installers and suppliers throughout the insulation industry.

With over 250 delegates already booked to attend, the conference promises to be an enjoyable and informative event for everyone involved in the insulation industry (solid wall, cavity wall and loft insulation and draft proofing). There will be an excellent line up of speakers as well as a key note address, plus the opportunity for members to ask questions and have their opinions heard on a range of topics.

What's more - the culmination of this annual event is the prestigious Gala Dinner at which the winners of the coveted annual industry awards will also be announced.

For more information about attending, exhibiting or sponsorship opportunities of this event should contact Maeva Robson at the NIA - Maeva.robson@nationalinsulationassociation.org.uk – or call 01525 383313.

Ends

Notes to Editors

 The National Insulation Association represents over 90% of the UK's home insulation industry, including installers and manufacturers. The NIA and its members are committed to providing a high quality, value for money service to householders, housing managers and developers.

The NIA is here to help you with expert opinions and comments on any matter that concerns the insulation of homes and businesses. For further information and images call Duncan or Michele at the NIA press office on 01327 701 702 or email duncan@evolution-pr.co.uk.

NIA installers carry out work that complies with national standards and technical approvals such as the British Board of Agrément, and in the case of Cavity Wall Insulation according to the Cavity Insulation Guarantee Agency technical guidance covering assessment and installation.

Cavity Wall Insulation work is covered by the Cavity Insulation Guarantee Agency's (CIGA) independent 25-year guarantee. www.ciga.co.uk

All of our members abide by the NIA Code of Professional Practice.

- Half of the heat lost in a home is through the walls or loft space.
- The UK's housing stock is estimated at approximately 24.5 million dwellings and of that, approximately 36% are non-cavity wall construction – solid brick, solid stone, pre-1944 timber frame and non-traditional (i.e. concrete construction). It is estimated that there are around 7m properties that have solid walls that need insulating.
- Cavity Wall Insulation is the most cost-effective way of improving comfort levels and reducing energy use in the home. Average savings of around 15%, equating to £115 per year can be made on a typical home's energy bills. The installation is clean, safe and only takes a couple of hours.
- It's estimated that around 9 million UK homes have cavity walls which have not been insulated. Collectively, they are wasting around £950 million every year through the energy being lost through their walls. This still leaves roughly one in three British households which could have their comfort levels increased and their fuel bills reduced.
- Increasing the thickness of existing loft insulation in the 13 million homes with 100mm or less of loft insulation to thicknesses required for modern new dwellings (270mm) would reduce each of their individual energy costs by around 25%. By fitting loft insulation, householders can reduce heating costs by around 15%.
- In 2003, space heating accounted for around 53% of carbon dioxide emissions in the UK. Over 40% of the Government's projected carbon savings for the household sector are expected to come from insulation.
- This corresponds to around 200MtC over the lifetime of the measures, nearly 15% of the annual household emissions.

To find a local NIA approved installer in your area, access information on the benefits of insulation or find details of grants available please visit our website :-

The biggest carbon challenge in the UK is to significantly tackle the real “energy wasters”, the existing housing stock.
